Security Scan Report

Generated: 2026-05-17 18:18 UTC · Source: nodoc_ibiza-iam.yml

10 / 100

Tier 0 — LOW RISK

1 findings total · 1 HIGH

Top Findings

[NEXUM-004] HIGH

/SecurityDefaults/UpdateSecurityDefaultOnSave

PUT /SecurityDefaults/UpdateSecurityDefaultOnSave accepts no Idempotency-Key header. Network retries or agent replays can create duplicate resources or apply the same mutation more than once without any safeguard.

Full Findings — Grouped by Rule

NEXUM-004 — IdempotencyMissing (HIGH)

Path	Method	Severity
/SecurityDefaults/UpdateSecurityDefaultOnSave	PUT	HIGH

Guardrail: Add 'Idempotency-Key' as a required request header. The server must store the key and return the original response for duplicate requests received within a reasonable window.

Manual Review Required

- **model_compatibility_range:** Cannot be inferred from the spec. Depends on model capabilities, deployment context, and the desired trust level for this integration.
- **auto_detected_invariants.immutable_fields:** No readOnly properties found in component schemas. Manually list any fields that must never change after resource creation.
- **auto_detected_invariants.numeric_limits:** No numeric or length constraints found in component schemas. Specify min/max bounds for any safety-critical numeric fields.
